MARINE MAMMAL TRAINING COURSES

HOW WE TRAIN

The training courses are about ensuring the acquisition of knowledge, attaining new skills, and achieving of competencies. This is accomplished with the experience of our staff who have a wide range of knowledge and practical skills on an international level.

We ensure that vocational, practical skills and knowledge relate to specific useful competencies. Our training forms the core background information and provides the backbone of content to support Marine Mammal Observers in the field.

In addition to the core training required for this profession, we provide additional advanced training and specialised training for specific equipment where required.

We give continuous support to all our trained students from the moment they qualify and unlike other courses, we offer a FREE refresher course every 3 years. Industries today recognise the need to continue training beyond initial qualifications, to maintain, upgrade and update skills throughout working life, we provide this professional development for each and every person who is trained by our company.

The MMO course takes place in a fully equipped classroom which has the advantage of allowing people to get away from work and concentrate more thoroughly on the training itself. All students will be using the actual tools, equipment, documents and materials that they will be expected to as a qualified MMO. Our training has specific goals of improving one's capability, capacity, and performance - each student who has come through our training is graded so a prospective employer knows exactly how dedicated each trainee is.

The practical unit of "on-the-job training" has a general reputation as being the most effective for vocational work, so this is exactly what we do. Students are in a simulated work environment and will have to respond to each and every situation we put their way; this is completed in the classroom and at sea. Each student is carefully monitored throughout this training process and assessed accordingly.

We provide, on request, a training report for each individual student to ensure they have thorough knowledge and understanding of the work situation they will be placed in.

PRIVATE COURSES

All training courses are available for private tuition internationally. Course content can be catered specifically to any job requirements and the companies needs.

Training can be provided on location or at one of our various training centres across the world.

Please contact us for further details.

TRAINING CENTRES

MARINE MAMMAL OBSERVER COURSE

The marine mammal observer training course is available to students all over the world. In 3 days you will be fully qualified and equipped with all the knowledge you will need in order to work as an MMO.

MMO COURSE CONTENT

- Interaction history of sound and marine mammals
- Introduction to law, guidelines and the legal role of an MMO
- Introduction to marine mammals and physiology
- Marine mammal behaviours
- Monitoring methods and techniques for field observation
- Introduction to species identification
- Observation and reporting systems
- Animal ID quiz
- Video sighting, form filling, video assessment and role play
- Work and interaction offshore an MMOs view
- Monitoring, observation methods, form completion and MMO role play
- Individual review, feedback and test results
- Presentation of certificate

PASSIVE ACOUSTIC MONITOR OPERATOR COURSE

Like the MMO course, the Passive Acoustic Monitor Operator training course is also available across the world. In 1.5 days you will be fully trained and equipped with all the knowledge you will need to work as a PAMO operator.

PAMO COURSE CONTENT

- Introduction to course, what is PAMO, why use PAMO and some examples of PAMO
- Guidelines around the world - what they say about PAMO
- Introduction to underwater acoustics
- Underwater noise
- Different types of PAMO systems
- PAMO processing, ways in processing signals to enhance the detectability of marine mammal calls
- Understanding PAMO displays, time and spectrogram displays
- Animal acoustics and call recognition
- Operating a PAMO system watch
- A PAMO watch - students will carry out a PAMO watch
- Acoustic deterrents
- The future of PAMO
- Individual review, feedback and test results
- Presentation of certificate
